NIST's Performance Evaluation System

Paul DoremusDirector, NIST Program Office

Visiting Committee on Advanced Technology September 13, 2004

NIST's Stakeholder Community

- External stakeholders that request information about NIST's performance:
 - Administration
 - Department of Commerce (DOC)
 - Office of Management and Budget (OMB)
 - Office of Science and Technology Policy (OSTP)
 - Congress
 - House and Senate Appropriations Committees
 - House and Senate Authorizing Committees
 - Federal Advisory Committees
 - NIST-wide: Visiting Committee on Advanced Technology (VCAT)
 - External Boards for each of NIST's extramural programs

External Requirements for Performance Evaluation

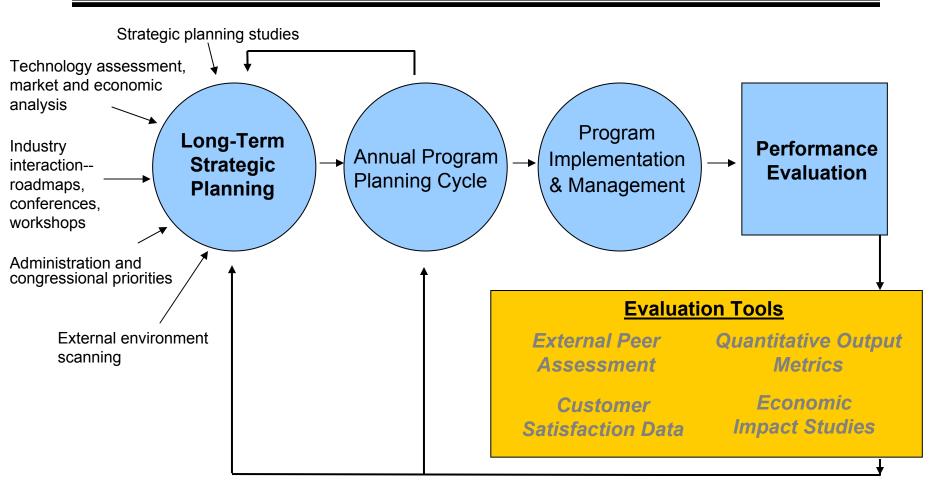

- Stakeholder requirements for performance-based management
 - Legislative: Government Performance and Results Act (GPRA, 1993)
 - Requires all agencies to produce strategic plans every three years and annual performance plans and reports
 - Primary focus: "Vital few, outcome-oriented measures"
 - Executive: President's Management Agenda
 - Budget and performance integration
 - R&D investment criteria
 - Program Assessment Rating Tool
 - Primary focus: good management practices, proven results

Issues in Reporting Results

- Mission requires complex evaluation system
- No "vital few outcome-oriented metrics"
- Performance data not synchronized with budget cycle
- Uncertain utility for stakeholders

NIST's Planning and Performance Evaluation System

NIST's Value Chain

Inputs

Funding

Appropriated and reimbursable funds

Staff

3000+ employees Guest

Guesi

researchers/year

Facilities and

Equipment

State-of-the-art

measurement and

standards

laboratories

(Advanced

Chemistry Lab;

Advanced

Measurement Lab;

CNRF)

Activities

Laboratory research

Measurement services and product dissemination

Conferences and workshops

Participation in standards committees and working groups

Outputs

Contributions to basic measurement science

Measurement and test methods

Standards development

Calibration services

Reference materials

Evaluated data

Technical publications

Advisory services and other knowledge transfer

Impacts on Primary Customers

Facilitate new R&D and technical capabilities

Increase R&D productivity

Develop new products, processes & services

Improve product or service quality and performance

Improve process quality and efficiency

Reduce technical barriers to trade

Lower transaction costs

Outcomes

Supply Chain Impacts

Improvements in sales, profits, and employment

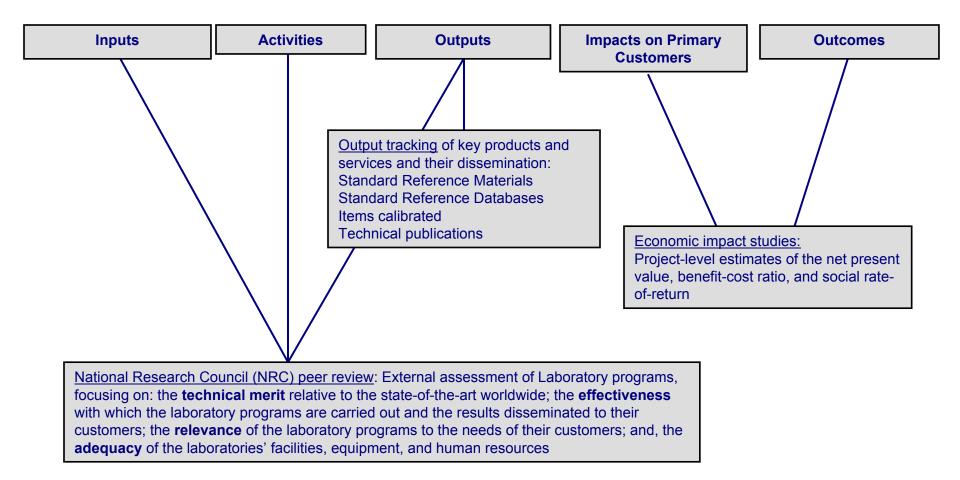

Socioeconomic Impacts

Productivity gains Increased market access and efficiency

Public benefits: higher standard of living; better quality of life

NIST Laboratories Impact Path and Evaluation Tools

Strengths & Weaknesses of Measurement Methods

	Scope & Purpose	Strengths	Limitations
Peer Review	Assess technical quality within operating units. Provides essential data for quality control, laboratory management & planning.	Broad and detailed review by external technical experts. Balanced panels; expertise matches each operating unit. NRC independence, high technical capability, and internal quality controls.	Intrinsic features of peer review: panel judgments are not quantifiable; observations and findings are highly contextual and detailed; assessments are not comparable (e.g. no cumulative performance ranking).
Quanti- tative Output Metrics	Diverse output indicators for key functions. Important to track for internal management & resource planning.	Direct counts of activities and outputs generate highly reliable quantitative data. Robust data collection systems. Data are cumulative and allow trend analysis.	Provide no information on quality or impact; trends require contextual interpretation; indicators not uniformly relevant to all OUs; indicators as a set are not a comprehensive output meaasure.
Impact Studies of Research Outcomes	Assess down-stream impacts of research projects & infratechnologies. Provides data for evaluating research outcomes & long-term planning.	Provides quantitative and qualitative data re. outcomes. Provides data on impacts over long time periods and across layers of the supply chain affected by NIST. Highly qualified economists and technical specialists conduct detailed analyses using well-developed research methods.	Studies are intermittent and results are not cumulative; elements of user population often are too diffuse to measure; uneven availability and quality of industry data; methodological problems specific to each measure; outcomes are specific to each project (limited comparability); studies are expensive.

Internal Needs for Performance Evaluation

- Evaluate current work portfolio
 - Technical merit relative to state-of-the-art
 - Relevance to customer needs
- Evaluate retrospective performance
 - Test validity of impact logic model
 - Improved understanding of impact pathways

Performance-Based Management

- Scorecard management system developed in FY 2004, being refined for FY 2005
- Scorecard framework:
 - Programs: Maximize impact and demonstrate programmatic results
 - People: Continuous improvement in developing and managing a high-performance workforce
 - Resources: Maximize operational, organizational and programmatic leverage and impact
 - Customers: Improve customer satisfaction with NIST's products and services

Issues in Evaluating Research Outcomes

- Scope of measurable impact
 - Impact pathways within and across supply chains
 - Causal complexity and attribution challenges
 - Retrospective: how to assess counterfactual results?
 - Prospective: how to value alternative investments?
 - Boundaries of quantitative and qualitative assessment
- Difficulty of assessing research portfolios
 - Portfolio composition: mix and complementarity
 - Portfolio balance: risk and time horizons
- Data access, quality, and reliability
- Long time frames

Issues in Evaluating Research Investments

- Intrinsic measurement challenges
 - Evaluating productivity of laboratory functions
 - Validating scientific and technical judgment
- Qualitative evaluation most useful internally, but not entirely persuasive externally
- Consequent approach:
 - Diverse set of measurement methods
 - Most comprehensive method: qualitative peer assessment provided by the National Research Council
